Loren Bjelokosić

Full-stack Developer

I'm a full-stack web developer with a strong focus on building responsive, user-friendly websites and web applications. On the frontend, I work with **React** and **Tailwind CSS,** as well as Filament for building admin dashboards and internal tools. For backend development, I use **Laravel** and **Livewire**. Through freelance projects and hands-on experience from college assignments, I've built a solid foundation in both frontend and backend development. I'm now looking to join a team where I can continue learning, grow my skills, and contribute to impactful, real-world projects.
